

## *One Mahurangi Transport & Infrastructure Forum 21 Feb 2025*

Later this year Watercare install a new larger wastewater pipeline along a short stretch of Elizabeth St adjacent to the bridge – including a pipe bridge attached to the existing pedestrian bridge. These works are separate to the will help reduce the need for ongoing maintenance and flushing of the existing pipeline due to blockages and reduce the frequency of wet weather overflows from the Elizabeth St engineered overflow point. Please note that this is a separate project to the Warkworth growth servicing pipeline.

To help inform our design, and minimise construction issues, our contractors need to undertake potholing investigations. These potholes will identify and physically locate the existing underground infrastructure that the new pipelines will need to avoid/cross. Conducting these investigations will ensure there is minimal disruption to the existing services and allow for timely and efficient construction.

Works will take place from 25<sup>th</sup> February - 27<sup>th</sup> February 2025 between 7am - 7pm and will result in a temporary lane closure on Elizabeth Street as well as a short detour.

Once the design for the upgrades is confirmed we will update One Mahurangi and the wider community with further information.

**Any questions about the Elizabeth Street wastewater pipe upgrades?**
